PROFILE

1. HTML (HyperText Markup Language): The foundation of web development, HTML is used to structure content on the web. Front-end developers use HTML to create the basic structure of web pages.
2. CSS (Cascading Style Sheets): CSS is used for styling and formatting web pages. It enables developers to control the layout, colors, fonts, and overall visual appearance of the site.
3. JavaScript: JavaScript is a programming language that allows developers to add dynamic and interactive features to websites. It is essential for creating responsive and engaging user interfaces.
4. Responsive Design: Front-end developers need to ensure that websites are responsive, meaning they adapt to different screen sizes and devices. This is often achieved using media queries and flexible grid layouts.
5. Version Control/Git: Knowledge of version control systems like Git is important for collaborative development and managing code changes.

WORK EXPERIENCE

Asqure tec Software House   2022 - 23

Front-end Development

- As a Front-end Developer, you will play a crucial role in shaping the user interface and overall user experience of our web applications. You will work closely with the design and back-end development teams to implement visually appealing and responsive interfaces. Your primary focus will be on the client-side of our applications, ensuring seamless navigation and optimal user interaction.
